RoHS Compliant

CFast 2H

CFast 2H-M Product Specifications (Toshiba 15nm)

December 16, 2015

Version 1.1

Apacer Technology Inc.

1F, No.32, Zhongcheng Rd., Tucheng Dist., New Taipei City, Taiwan, R.O.C Tel: +886-2-2267-8000 Fax: +886-2-2267-2261 www.apacer.com

Features:

• Standard Serial ATA Interface

- SATA Revision 3.1 compliance
- SATA 6.0 Gbps interface speed
- Backward compatible with SATA 1.5 and 3.0 Gbps interfaces
- ATA-compatible command set
- Capacity
 - 8, 16, 32, 64, 128 GB

• Flash Management

- Built-in hardware ECC
- Static/dynamic wear-leveling
- Flash bad-block management
- S.M.A.R.T.
- Power Failure Management
- ATA Secure Erase
- TRIM
- Performance*
 - Sustained read: Up to 415 MB/sec
 - Sustained write: Up to 175 MB/sec
- NAND Flash Type: MLC
- MTBF: >1,000,000 hours

• Endurance

- 8 GB: 7 TBW
- 16 GB: 14 TBW
- 32 GB: 28 TBW
- 64 GB: 57 TBW
- 128 GB: 114 TBW
- Temperature Range
 - Operating:
 - Standard: 0°C to 70°C
 - Extended: -40°C to 85°C
 - Storage: -40°C to 85°C
- Power Consumption*
 - Supply voltage: 3.3V
 - Active mode: 460 mA
 - Idle mode: 95 mA
- Connector Type
 - 7 + 17 pin female connector
- RoHS Compliant
- DEVSLP Supported

*Vary from capacities. The values presented in Power consumption and Performances are typical, and may vary depending on different settings and platforms.

1. General Description

Apacer CFast 2H-M is the latest enhancement of conventional CFast form factor that delivers various technological advantages. This new flash memory card comes with SATA 6.0 Gbps interface for higher performance and is compliant with standard CFast specifications. CFast 2H-M consists of SATA-based 7-pin signal segment and 17-pin for power and control purposes. It can offer moderate capacity and decent data transfer performance. For power efficiency, this new flash memory card leverages the technological benefits of SATA Revision 3.0 specifications. For data integrity, the CFast card is built with ECC engine correcting up to 72-bit. Together with its small form factor nature, Apacer CFast 2H-M is definitely the ideal solution to replace conventional PATA-based CompactFlash for applications in industrial computing systems, mobile computers and video processing instruments.

2. Functional Block

Apacer CFast 2H-M includes a single-chip SATA 6.0 Gbps and the flash media. The controller integrates the flash management unit to support multi-channel, multi-bank flash arrays. Figure 2-1 shows the functional block diagram.

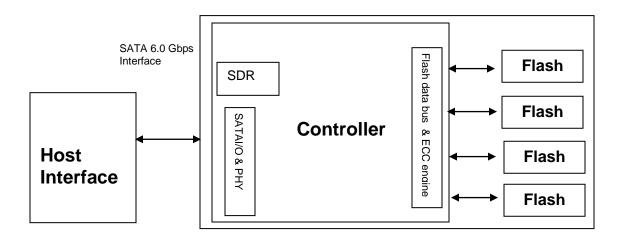

Figure 2-1 Apacer CFast Block Diagram

3. Pin Assignments

Table 3-1 describes CFast 2H-M signal segment, and Table 3-2, its power segment.

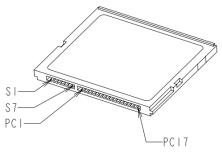

Figure 3-1 Pin Assignment

Pin	Туре	Description
S1	GND	Ground
S2	A+	SATA Differential
S3	A-	Signal Pair A
S4	GND	Ground
S5	В-	SATA Differential
S6	B+	Signal Pair B
S7	GND	Ground

Table 3-1 Signal Segment

Table 3-2 Power Segment

Pin	Definition	Туре	Description
PC1	CDI	Input	Card Detect In
PC2	PGND	Device GND	Device GND
PC3			Reserved
PC4			Reserved
PC5			Reserved
PC6			Reserved
PC7	PGND	Device GND	Device GND
PC8	LED1	LED Output	LED Output
PC9	LED2	LED Output	LED Output
PC10			Reserved
PC11			Reserved
PC12	IFDet	GND	Card output, connect to PGND on card
PC13	PWR	3.3V	Device power (3.3V)
PC14	PWR	3.3V	Device power (3.3V)
PC15	PGND	Device GND	Device GND
PC16	PGND	Device GND	Device GND
PC17	CDO	Output	Card Detect Out

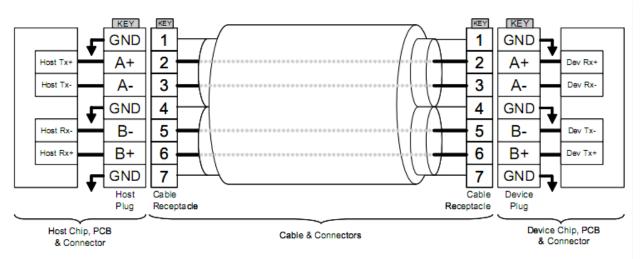

Figure 3-2 SATA Cable / Connector Connection Diagram

The connector on the left represents the Host with TX/RX differential pairs connected to a cable while the connector on the right shows the Device with TX/RX differential pairs also connected to the cable. Notice also the ground path connecting the shielding of the cable to the Cable Receptacle.

4. Product Specifications

4.1 Capacity

Capacity specification of the CFast 2H-M is available as shown in Table 4-1. It lists the specific capacity and the default numbers of heads, sectors and cylinders for each product line.

Capacity	Total bytes*	Cylinders	Heads	Sectors	Max LBA
8 GB	8,012,390,400	15,525	16	63	15,649,200
16 GB	16,013,942,784	16,383	16	63	31,277,232
32 GB	32,017,047,552	16,383	16	63	62,533,296
64 GB	64,023,257,088	16,383	16	63	125,045,424
128 GB	128,035,676,160	16,383	16	63	250,069,680

Table 4-1 Capacity Specifications

*Display of total bytes varies from file systems.

**Cylinders, heads or sectors are not applicable for these capacities. Only LBA addressing applies

LBA count addressed in the table above indicates total user storage capacity and will remain the same throughout the lifespan of the device. However, the total usable capacity of the CFast-M is most likely to be less than the total physical capacity because a small portion of the capacity is reserved for device maintenance usages.

4.2 Performance

Performance of CFast 2H-M product family is available as shown in Table 4-2.

Table 4-2 Performance

Capacity Performance	8 GB	16 GB	32 GB	64 GB	128 GB
Sustained Read (MB/s)	140	235	225	410	415
Sustained Write (MB/s)	100	155	130	165	175

Note: Performances results are measured by CrystalDiskMark under Windows 7 and may vary from host system configurations.

4.3 Environmental Specifications

Environmental specification of the CFast 2H-M follows the MIL-STD-810F testing standards, shown in Table 4-3.

Environment		Specifications
_ Operation		0°C to 70°C (Standard); -40°C to 85°C (Extended)
Temperature	Storage	-40°C to 85°C
Vibration (Non-Operating)		80~2000Hz/20G (acceleration) ; 20~80Hz/1.52mn (displacement), X,Y, Z axis/30 min for each
Shock (Non-Operating)		Half sine wave, 1,500 G (X, Y, Z ; All 6 axis)
Drop (non-operating)		110cm free fall, 6-face each unit
Bending (non-operating)		≥20N, hold 1min/5times
Torque (non-operating)		0.5N-m or ±2.5 degree, hold 5min/5times

Table 4-3 Environmental Specifications

Note: this Environmental Specification table indicates the conditions for testing the device. Real world usages may affect the results.

4.4 Mean Time Between Failures (MTBF)

Mean Time Between Failures (MTBF) is predicted based on reliability data for the individual components in CFast 2H-M. Serving as statistical reference, the prediction result for CFast 2H-M is more than 1,000,000 hours.

4.5 Certification and Compliance

CFast 2H-M complies with the following standards

- CE
- FCC
- BSMI
- RoHS

5. Flash Management

5.1 Error Correction/Detection

Flash memory cells will deteriorate with use, which might generate random bit errors in the stored data. Thus, the CFast-M applies the BCH ECC Algorithm, which can detect and correct errors up to 72-bit in 1K byte data during Read process, ensure data been read correctly, as well as protect data from corruption.

5.2 Bad Block Management

Bad blocks are blocks that include one or more invalid bits, and their reliability is not guaranteed. Blocks that are identified and marked as bad by the manufacturer are referred to as "Initial Bad Blocks". Bad blocks that are developed during the lifespan of the flash are named "Later Bad Blocks". Apacer implements an efficient bad block management algorithm to detect the factory-produced bad blocks and manages any bad blocks that appear with use. This practice further prevents data being stored into bad blocks and improves the data reliability.

5.3 Wear Leveling

NAND Flash devices can only undergo a limited number of program/erase cycles, and in most cases, the flash media are not used evenly. If some areas get updated more frequently than others, the lifetime of the device would be reduced significantly. Thus, Wear Leveling technique is applied to extend the lifespan of NAND Flash by evenly distributing write and erase cycles across the media.

Apacer provides advanced Wear Leveling algorithm, which can efficiently spread out the flash usage through the whole flash media area. Moreover, by implementing both dynamic and static Wear Leveling algorithms, the life expectancy of the NAND Flash is greatly improved.

5.4 Power Failure Management

Power Failure Management is a mechanism to prevent data loss during unexpected power failure. When power outage occurs, the data that has not been written into NAND Flash is in risk. Thus, the purpose of this mechanism is to request the controller to transfer data to the cache. In this CFast-M 2.0 structure, SDR performs as a cache, and its sizes is 32MB. Only when the data is fully committed to the NAND flash will the controller send acknowledgement (ACK) to the host. Such implementation can prevent false-positive performance and the risk of power cycling issues.

Additionally, it is critical for a controller to shorten the time the in-flight data stays in the cache. Thus, this CFast 2H-M memory card applies an algorithm to reduce the amount of data resides in the cache to provide a better performance. This allows incoming data to only have a "pit stop" in the cache and then move to the NAND flash at once. If the flash is jammed due to particular file sizes (random 4K), the cache will be treated as an "organizer", consolidating incoming data into groups before written into the flash to improve write amplification.

5.5 ATA Secure Erase

ATA Secure Erase is an ATA disk purging command currently embedded in most of the storage drives. Defined in ATA specifications, (ATA) Secure Erase is part of Security Feature Set that allows storage drives to erase all user data areas. The erase process usually runs on the firmware level as most of the ATA-based storage media currently in the market are built-in with this command. ATA Secure Erase can securely wipe out the user data in the drive and protects it from malicious attack.

5.6 S.M.A.R.T.

SMART, an acronym for Self-Monitoring, Analysis and Reporting Technology, is an open standard that allows a hard disk drive to automatically detect its health and report potential failures. When a failure is recorded by SMART, users can choose to replace the drive to prevent unexpected outage or data loss. Moreover, SMART can inform users of impending failures while there is still time to perform proactive actions, such as copy data to another device.

5.7 TRIM

TRIM is a feature which helps improve the read/write performance and speed of Solid-State Drives (SSD). Unlike Hard Disk Drives (HDD), SSDs are not able to overwrite existing data, so the available space gradually becomes smaller with each use. With the TRIM command, the operating system can inform the SSD which blocks of data are no longer in use and can be removed permanently. Thus, the SSD will perform the erase action, which prevents unused data from occupying blocks all the time.

5.8 Endurance

The endurance of a storage device is predicted by TeraBytes Written based on several factors related to usage, such as the amount of data written into the drive, block management conditions, and daily workload for the drive. Thus, key factors, such as Write Amplifications and the number of P/E cycles, can influence the lifespan of the drive.

Capacity	TeraBytes Written
8 GB	7
16 GB	14
32 GB	28
64 GB	57
128 GB	114

Notes:

- The measurement assumes the data written to the SSD for test is under a typical and constant rate.
- The measurement follows the standard metric: 1 TB (Terabyte) = 1,000 GB.
- This estimation complies with JEDEC JESD-219, enterprise endurance workload of random data with payload size distribution.

Table 6-1 Command Set

7. Electrical Specifications

7.1 Operating Voltage

Table 7-1 lists operating voltage of CFast-M 2.0.

Table 7-1 Operating Voltage

Parameter	Symbol	Min	Тур	Мах	Units
Power Supply	Vcc	3.135	3.3	3.465	V

7.2 Power Consumption

Table 7-2 lists power consumption of CFast-M 2.0.

Table 7-2 Power Consumption (typical)

Capacity	8 GB	16 GB	32 GB	64 GB	128 GB
Active (mA)	230	280	290	425	460
Standby (mA)	85	85	85	95	95

Note: Power consumption may vary from flash configurations and/or platform settings.

8. Physical Characteristics

8.1 Dimensions

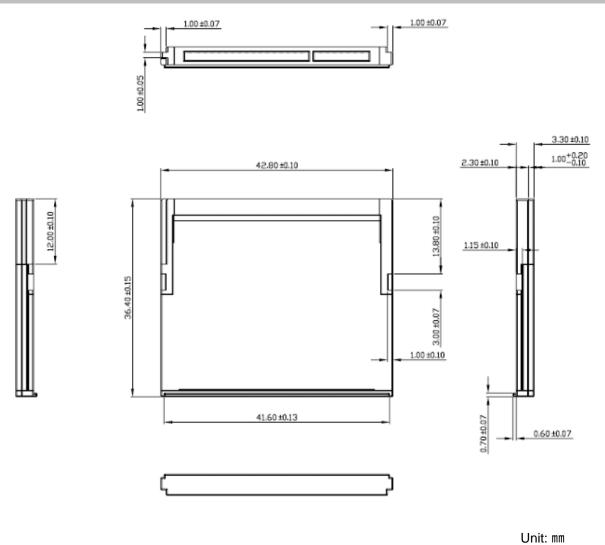

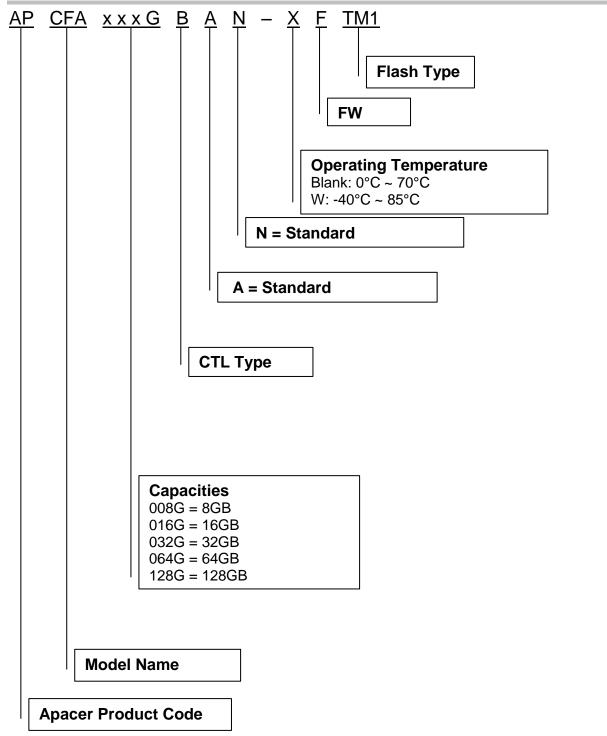

FIGURE 8-1: Physical Dimensions

9. Product Ordering Information

9.1 Product Code Designations

9.2 Valid Combinations

9.2.1 Standard Temperature

Capacity	AP/N
8GB	APCFA008GBAN-FTM1
16GB	APCFA016GBAN-FTM1
32GB	APCFA032GBAN-FTM1
64GB	APCFA064GBAN-FTM1
128GB	APCFA128GBAN-FTM1

9.2.2 Wide Temperature

Capacity	AP/N
8GB	APCFA008GBAN-WFTM1
16GB	APCFA016GBAN-WFTM1
32GB	APCFA032GBAN-WFTM1
64GB	APCFA064GBAN-WFTM1
128GB	APCFA128GBAN-WFTM1

Revision History

Revision	Date	Description	Remark
1.0	11/25/2015	Official release	
1.1	12/16/2015	Revised performance and power consumption values for 64GB and 128GB models.	

Global Presence
