Absolute Maximum Ratings

Parameter	Symbol	Description	Units
Voltage on VDD pin relative to Vss	V _{DD}	- 0.4 V ~ 1.975 V	V
Voltage on VDDQ pin relative to Vss	V _{DDQ}	- 0.4 V ~ 1.975 V	V
Voltage on any pin relative to Vss	V _{IN} , V _{OUT}	- 0.4 V ~ 1.975 V	V
Storage Temperature	TSTG	-55 to +100	°C

Notes:

1. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. Storage Temperature is the case surface temperature on the center/top side of the DRAM. For the measurement conditions, please refer to JESD51-2 standard.
3. VDD and VDDQ must be within 300mV of each other at all times; and VREF must not be greater than 0.6 x VDDQ, when VDD and VDDQ are less than 500mV; VREF may be equal to or less than 300mV.

DRAM Component Operating Temperature Range

Symbol	Parameter	Rating	Units	Notes
TOPER	Operating Temperature Range	-40 to 95	°C	1,2

Notes:

1. Operating Temperature TOPER is the case surface temperature on the center/top side of the DRAM. For measurement conditions, please refer to the JEDEC document JESD51-2.
2. The Normal Temperature Range specifies the temperatures where all DRAM specifications will be supported. During operation, the DRAM case temperature must be maintained between -40°C~95°C under all operating conditions.

Industrial Temperature:

The industrial temperature device requires that the case temperature not exceed -40°C or +95°C. JEDEC specifications require the refresh rate to double when TC exceeds +85°C; this also requires use of the high-temperature self refresh option.

- ◆ MAX operating case temperature. TC is measured in the center of the package.
- ◆ A thermal solution must be designed to ensure the DRAM device does not exceed the maximum TC during operation.
- ◆ Device functionality is not guaranteed if the DRAM device exceeds the maximum TC during operation.
- ◆ If TC exceeds +85°C, the DRAM must be refreshed externally at 2X refresh, which is a 3.9μs interval refresh rate.

Operating Conditions

Recommended DC Operating Conditions - DDR3 (1.5V) operation

Symbol	Parameter	Rating			Units
		Min.	Typ.	Max.	
VDD	Supply Voltage	1.425	1.5	1.575	V
VDDQ	Supply Voltage for Output	1.425	1.5	1.575	V

Notes:

1. Under all conditions VDDQ must be less than or equal to VDD..
2. VDDQ tracks with VDD. AC parameters are measured with VDD and VDDQ tied together.
