

RoHS Compliant

Serial ATA Flash Drive

SFD18A-M Product Specifications

July 15, 2015

Version 1.0

Apacer Technology Inc.

1F, No.32, Zhongcheng Rd., Tucheng Dist., New Taipei City, Taiwan, R.O.C

Tel: +886-2-2267-8000 Fax: +886-2-2267-2261

www.apacer.com

Features:

- **Compliance with SATA Revision 3.1**
 - SATA 6.0 Gbps interface
 - Backward compatible with SATA 1.5 and 3.0 Gbps interfaces
 - ATA-8 command set
- **Capacities**
 - 32, 64, 128 GB
- **Performance***
 - Interface burst read/write: 600 MB/sec
 - Sustained read: up to 530 MB/sec
 - Sustained write: up to 455 MB/sec
 - Random read (4K): up to 82,000 IOPS
 - Random write (4K): up to 79,000 IOPS
- **Flash Management**
 - Built-in hardware ECC
 - Static/dynamic wear leveling
 - Flash bad-block management
 - S.M.A.R.T.
 - Power Failure Management
 - ATA Secure Erase
 - TRIM
- **NAND Flash Type: MLC**
- **Temperature ranges**
 - Operating:
 - Standard: 0°C to 70°C
 - Extended: -40°C to 85°C
 - Storage: -40°C to 100°C
- **Supply voltage**
 - 3.3V & 5V
- **Power consumption (typical)***
 - Active mode: 670 mA
 - Idle mode: 75 mA
- **Form factor**
 - 1.8 inch (78.5 x 54 x 5, unit: mm)
- **Connector**
 - 7-pin SATA male connector
 - 9-pin SATA power connector
- **Shock & Vibration****
 - Shock: 1500 G
 - Vibration: 15 G
- **SATA power management modes**
- **Device Sleep mode (optional)**
- **RoHS compliant**

*The values addressed here are typical and may vary depending on settings and platforms.

**Non-operating

1. Product Description

1.1 Introduction

Apacer's SFD18A is a well-balanced solid-state disk (SSD) drive with standard form factor and great performance. Designed in SATA 6.0 Gbps interface, the SSD is able to deliver exceptional read/write speed, making it the ideal companion for heavy-loading industrial or server operations. In regard of reliability, the drive comes with various implementations including powerful hardware ECC engine, power saving modes, wear leveling, flash block management, S.M.A.R.T., TRIM, and power failure management.

1.2 Capacity Specification

Table 1-1 Capacity specification

Capacity	Total Bytes*	Cylinders	Heads	Sectors	Max LBA*
32 GB	32,017,047,552	16,383	16	63	62,533,296
64 GB	64,023,257,088	16,383	16	63	125,045,424
128 GB	128,035,676,160	16,383	16	63	250,069,680
256 GB	256,060,514,304	16,383	16	63	500,118,192

*Display of total bytes varies from file systems.

**Cylinders, heads or sectors are not applicable for these capacities. Only LBA addressing applies.

LBA count addressed in the table above indicates total user storage capacity and will remain the same throughout the lifespan of the device. However, the total usable capacity of the SSD is most likely to be less than the total physical capacity because a small portion of the capacity is reserved for device maintenance usages.

1.3 Performance

Table 1-2 Performance

Capacity Performance	32 GB	64 GB	128 GB	256 GB
Sustained Read (MB/s)	390	540	540	530
Sustained Write (MB/s)	85	170	330	455
Random Read IOPS (4K)	58,000	81,000	82,000	82,000
Random Write IOPS (4K)	21,000	42,000	78,000	79,000

Note: Performance varies from flash configurations or host system settings.

IOPS: measured on 8GB span (16777216 sectors Disk Size), 32 Outstanding I/Os (QD=32), Full Random Data pattern, 4KB Align I/Os and test durations 15minutes.

1.4 Pin Assignments

Table 1-3 describes SAFD 18P signal segment, and Table1-4, its power segment.

Figure 1-1 Micro-SATA Connectors

Table 1-3 Signal segment

Name	Type	Description
S1	GND	
S2	RxP	+ Differential Receive Signal
S3	RxN	- Differential Receive Signal
S4	GND	
S5	TxN	- Differential Transmit Signal
S6	TxP	+ Differential Transmit Signal
S7	GND	

Table 1-4 Power segment

Pin	Type	Signal/Description
P1	V33	3.3 V Power
P2	V33	3.3 V Power
P3	GND	
P4	GND	
P5	V5	5 V Power
P6	V5	5 V Power
P7	GND	Reserved
P8	Optional	NC
P9	Optional	NC

Figure 1-3 SATA Cable/Connector Connection Diagram

The connector on the left represents the Host with TX/RX differential pairs connected to a cable. The connector on the right shows the Device with TX/RX differential pairs also connected to the cable. Notice also the ground path connecting the shielding of the cable to the Cable Receptacle.

2. Software Interface

2.1 Command Set

Table 2-1 summarizes the ATA commands supported by SFD18A.

Table 2-1: Command set

Code	Command	Code	Command
E5h	Check Power Mode	F6h	Security Disable Password
90h	Execute Diagnostics	F3h	Security Erase Prepare
E7h	Flush Cache	F4h	Security Erase Unit
EC	Identify Device	F5h	Security Freeze Lock
E3h	Idle	F1h	Security Set Password
E1h	Idle Immediate	F2h	Security Unlock
91h	Initialize Device Parameters	7Xh	Seek
C8h	Read DMA	Efh	Set Features
25h	Read DMA EXT	C6h	Set Multiple Mode
60h	Read FPDMA Queued	E6h	Sleep
47h	Read Log DMA EXT	B0h	S.M.A.R.T.
2Fh	Read Log EXT	E2h	Standby
C4h	Read Multiple	E0h	Standby Immediate
20 or 21h	Read Sector(s)	Cah	Write DMA
40 or 41h	Read Verify Sector(s)	35h	Write DMA EXT
10h	Recalibrate	61h	Write FPDMA Queued
57h	Write Log DMA EXT	3Fh	Write Log EXT
C5h	Write Multiple	30h or 31h	Write Sector(s)

2.2 S.M.A.R.T.

S.M.A.R.T. is an abbreviation for Self-Monitoring, Analysis and Reporting Technology, a self-monitoring system that provides indicators of drive health as well as potential disk problems. It serves as a warning for users from unscheduled downtime by monitoring and displaying critical drive information. Ideally, this should allow taking proactive actions to prevent drive failure and make use of S.M.A.R.T. information for future product development reference.

Apacer devices use the standard SMART command B0h to read data out from the drive to activate our S.M.A.R.T. feature that complies with the ATA/ATAPI specifications. S.M.A.R.T. Attribute IDs shall include initial bad block count, total later bad block count, maximum erase count, average erase count, power on hours and power cycle. When the S.M.A.R.T. Utility running on the host, it analyzes and reports the disk status to the host before the device reaches in critical condition.

Note: attribute IDs may vary from product models due to various solution design and supporting capabilities.

Serial ATA Flash Drive APS18AXxxxx-XXXXXX

Apacer memory products come with S.M.A.R.T. commands and subcommands for users to obtain information of drive status and to predict potential drive failures. Users can take advantage of the following commands/subcommands to monitor the health of the drive.

Code	SMART Subcommand
D0h	READ DATA
D1h	READ ATTRIBUTE THRESHOLDS
D2h	Enable/Disable Attribute Autosave
D4h	Execute Off-line Immediate
D5h	Read Log (optional)
D6h	Write Log (optional)
D8h	Enable Operations
D9h	Disable operations
Dah	Return Status

General SMART attribute structure

Byte	Description
0	ID (Hex)
1 – 2	Status flag
3	Value
4	Worst
5*-11	Raw Data

*Byte 5: LSB

SMART attribute ID list

ID (Hex)	Attribute Name
9 (0x09)	Power-on hours
12 (0x0C)	Power cycle count
163 (0xA3)	Max. erase count
164 (0xA4)	Avg. erase count
166 (0xA6)	Total later bad block count
167 (0xA7)	SSD Protect Mode (vendor specific)
168 (0xA8)	SATA PHY Error Count
175 (0xAF)	Bad Cluster Table Count
192 (0xC0)	Unexpected Power Loss Count
194 (0xC2)	Temperature
241 (0xF1)	Total sectors of write

3. Flash Management

3.1 Error Correction/Detection

SFD18A implements a hardware ECC scheme, based on the BCH algorithm. It can detect and correct up to 40 bits error in 1K bytes.

3.2 Bad Block Management

Current production technology is unable to guarantee total reliability of NAND flash memory array. When a flash memory device leaves factory, it comes with a minimal number of initial bad blocks during production or out-of-factory as there is no currently known technology that produce flash chips free of bad blocks. In addition, bad blocks may develop during program/erase cycles. When host performs program/erase command on a block, bad block may appear in Status Register. Since bad blocks are inevitable, the solution is to keep them in control. Apacer flash devices are programmed with ECC, block mapping technique and S.M.A.R.T to reduce invalidity or error. Once bad blocks are detected, data in those blocks will be transferred to free blocks and error will be corrected by designated algorithms.

3.3 Wear Leveling

Flash memory devices differ from Hard Disk Drives (HDDs) in terms of how blocks are utilized. For HDDs, when a change is made to stored data, like erase or update, the controller mechanism on HDDs will perform overwrites on blocks. Unlike HDDs, flash blocks cannot be overwritten and each P/E cycle wears down the lifespan of blocks gradually. Repeatedly program/erase cycles performed on the same memory cells will eventually cause some blocks to age faster than others. This would bring flash storages to their end of service term sooner. Wear leveling is an important mechanism that level out the wearing of blocks so that the wearing-down of blocks can be almost evenly distributed. This will increase the lifespan of SSDs. Commonly used wear leveling types are Static and Dynamic.

3.4 Power Failure Management

Power Failure Management plays a crucial role when experiencing unstable power supply. Power disruption may occur when users are storing data into the SSD. In this urgent situation, the controller would run multiple write-to-flash cycles to store the metadata for later block rebuilding. This urgent operation requires about several milliseconds to get it done. At the next power up, the firmware will perform a status tracking to retrieve the mapping table and resume previously programmed NAND blocks to check if there is any incompleteness of transmission.

Note: The controller unit of this product model is designed with a DRAM as a write cache for improved performance and data efficiency. Though unlikely to happen in most cases, the data cached in the volatile DRAM might be potentially affected if a sudden power loss takes place before the cached data is flushed into non-volatile NAND flash memory.

3.5 ATA Secure Erase

ATA Secure Erase is an ATA disk purging command currently embedded in most of the storage drives. Defined in ATA specifications, (ATA) Secure Erase is part of Security Feature Set that allows storage drives to erase all user data areas. The erase process usually runs on the firmware level as most of the ATA-based storage media currently in the market are built-in with this command. ATA Secure Erase can securely wipe out the user data in the drive and protects it from malicious attack.

3.6 TRIM

TRIM is a SATA command that helps improve the read/write performance and efficiency of solid-state drives (SSD). The command enables the host operating system to inform SSD controller which blocks contain invalid data, mostly because of the erase commands from host. The invalid will be discarded permanently and the SSD will retain more space for itself.

3.7 SATA Power Management

By complying with SATA 6.0 Gb/s specifications, the SSD supports the following SATA power saving modes:

- ACTIVE: PHY ready, full power, Tx & Rx operational
- PARTIAL: Reduces power, resumes in under 10 μ s (microseconds)
- SLUMBER: Reduces power, resumes in under 10 ms (milliseconds)
- HIPM: Host-Initiated Power Management
- DIPM: Device-Initiated Power Management
- AUTO-SLUMBER: Automatic transition from partial to slumber.
- Device Sleep (DevSleep or DEVSLP): PHY powered down; power consumption \leq 5 mW; host assertion time \leq 10 ms; exit timeout from this state \leq 20 ms (unless specified otherwise in SATA Identify Device Log).

Note:

1. The behaviors of power management features would depend on host/device settings.
2. Device Sleep mode is optional, depending on product ordering selections.

4. Reliability Specifications

4.1 Environmental

SFD18A environmental specifications follow MIL-STD-810F, as indicated in the following table.

Table 4-1 SFD18A environmental specifications

Environment	Specification
Temperature	0°C to 70°C (Operating) / -40°C to 85°C (extended)
	-40°C to 100°C (Non-operating)
Vibration	Non-operating : Sine wave, 15(G), 10~2000(Hz), Operating : Random, 7.69(Grms), 20~2000(Hz)
Shock	Non-operating: Acceleration, 1,500 G, 0.5 ms Operating: Peak acceleration, 50 G, 11 ms

4.2 Mean Time Between Failures (MTBF)

Mean Time Between Failures (MTBF) is predicted based on reliability data for the individual components in SFD drive. The prediction result for the SFD18A is more than 2,000,000 hours.

Notes about the MTBF:

The MTBF is predicated and calculated based on "Telcordia Technologies Special Report, SR-332, Issue 2" method.

4.3 Certification and Compliance

SFD18A complies with the following standards:

- CE
- FCC
- RoHS
- MIL-STD-810F

5. Electrical Characteristics

5.1 Operating Voltage

Table 5-1 lists the supply voltage for SFD18A.

Table 5-1 SFD18A operating voltage

Parameter	Conditions
Supply voltage	3.3V \pm 5% (3.135-3.465V) / 5V \pm 5% (4.75-5.25V)

5.2 Power Consumption

Table 5-2 lists the power consumption for SFD18A.

Table 5-2 Power consumption (typical)

Mode \ Capacity	32 GB	64 GB	128 GB	256 GB
Active (mA)	230	305	500	670
Idle (mA)	75	75	75	75

Note: Power consumptions may vary depending on settings and platforms.

Technical drawing of a connector assembly showing dimensions and datums. The drawing includes the following features:

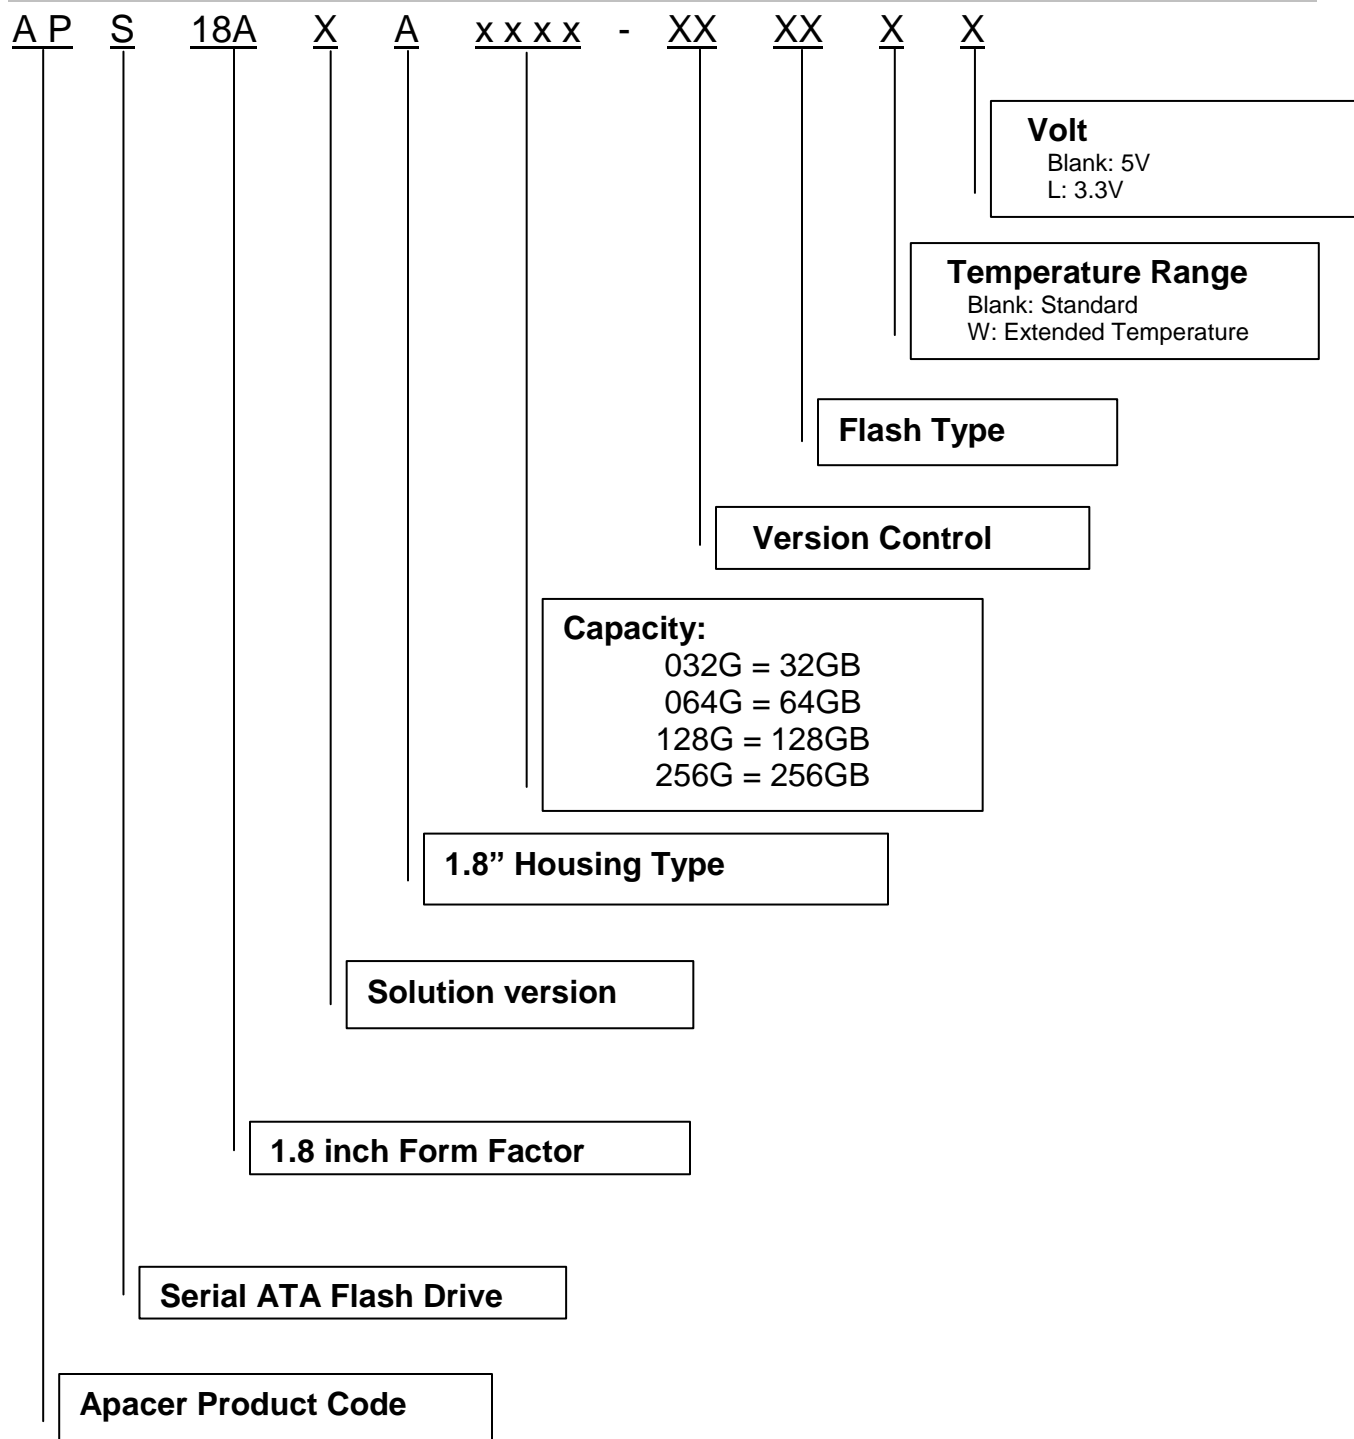

- Dimensions:**
 - Overall length: 54.0 ± 0.20
 - Distance from left end to Pin S1: 35.0
 - Distance from left end to Pin P1: 27.04
 - Distance from Pin P1 to Pin S1: 7.04
 - Distance from Pin S1 to right end: 19.0
 - Distance from left end to datum A: 5.00 ± 0.15
 - Distance from datum A to datum B: 3.30 ± 0.15
 - Distance from datum B to datum A: 1.35
- Datums:**
 - DATUM A OF CONNECTOR** (Datum A)
 - DATUM B** (Datum B)
 - DATUM Y** (Datum Y)
- Pin Labels:** Pin P1, Pin S1
- Feature Control Frame:**
 - Feature: $\varnothing 0.20$

Rev. 1.0

7. Product Ordering Information

7.1 Product Code Designation

7.2 Valid Combination

7.2.1 MLC-3.3V / Operating Temperature (0°C~ 70°C)

Capacity	No DEVSLP	DEVSLP
32GB	APS18A4A032G-3ATML	APS18A4A032G-3BTML
64GB	APS18A7A064G-3ATML	APS18A7A064G-3BTML
128GB	APS18A7A128G-3ATML	APS18A7A128G-3BTML
256GB	APS18A7A256G-3ATML	APS18A7A256G-3BTML

7.2.2 MLC-3.3V / Operating Temperature (-40°C~ 85°C)

Capacity	No DEVSLP	DEVSLP
32GB	APS18A4A032G-3ATMWL	APS18A4A032G-3BTMWL
64GB	APS18A7A064G-3ATMWL	APS18A7A064G-3BTMWL
128GB	APS18A7A128G-3ATMWL	APS18A7A128G-3BTMWL
256GB	APS18A7A256G-3ATMWL	APS18A7A256G-3BTMWL

7.2.3 MLC-5V / Operating Temperature (0°C~ 70°C)

Capacity	No DEVSLP	DEVSLP
32GB	APS18A4A032G-3ATM	APS18A4A032G-3BTM
64GB	APS18A7A064G-3ATM	APS18A7A064G-3BTM
128GB	APS18A7A128G-3ATM	APS18A7A128G-3BTM
256GB	APS18A7A256G-3ATM	APS18A7A256G-3BTM

7.2.4 MLC-5V / Operating Temperature (-40°C~ 85°C)

Capacity	No DEVSLP	DEVSLP
32GB	APS18A4A032G-3ATMW	APS18A4A032G-3BTMW
64GB	APS18A7A064G-3ATMW	APS18A7A064G-3BTMW
128GB	APS18A7A128G-3ATMW	APS18A7A128G-3BTMW
256GB	APS18A7A256G-3ATMW	APS18A7A128G-3BTMW

Note: Valid combinations are those products in mass production or will be in mass production. Consult your Apacer sales representative to confirm availability of valid combinations and to determine availability of new combinations.
