FEATURES:

- **USB2.0 High-Speed and USB1.1 Full-Speed Compatible Interface**
- **Capacity**
 - 256, 512 MB
 - 1, 2, 4, 8, 16, 32 GB
- **Performance**
 - Sustained read: up to 34 MB/s
 - Sustained write: up to 22 MB/s
- **Intelligent USB Module**
 - Implements dynamic wear-leveling algorithms to substantially increase longevity of flash media
 - BCH (24 bit) Error Detection Code/Error Correction Code (EDC/ECC)
 - Intrinsic data integrity after power loss
 - Wear leveling algorithm that provides more reliable data storage over an extended period
 - S.M.A.R.T.
- **Extended Data Protection (Optional)**
 - Write protection setting by jumper for prevention of data overwrites
- **NAND Flash Type: SLC**
- **MTBF**
 - Approximately greater than 4.20×10^6 hours
- **Support Boot-Up Function for OS**
 - Windows XP Embedded
 - Windows CE
 - Linux
 - Windows 7
- **Temperature Range**
 - Operating:
 - Standard: 0°C to 70°C
 - Extended: -40°C to 85°C
 - Storage: -40°C to 85°C
- **Power Consumption**
 - Active mode: 181 mA
 - Idle mode: 68 mA
 - Operating voltage: 5V (with a certain percentage of tolerance)
- **Connector**
 - 10-pin (2x5) female header
- **Supports Ready Boost for Vista**
- **Supports Non-Removable Setting**
- **RoHS Recast Compliant (2011/65/EU)**

*Varies from capacities. The results for performance and power consumption addressed here may vary in real world platforms.

1. General Description

Apacer's USB-Disk Module (UDM) is a high performance, embedded solid state drive (SSD) designed to replace a conventional IDE hard disk drive. UDM SSD can be plugged into a standard Embedded USB connector commonly found in desktops, portable PC systems and industrial PC systems. This product is well suited for embedded flash storage applications offering new and expanded functionality as well as more cost-effective designs, better performance and increased reliability.

1.1 Performance-optimized Controller

The heart of an UDM is the USB controller, which translates standard USB signals into the data and controls of the flash media. This proprietary USB controller is specifically designed to attain high data throughput from host to flash.

1.1.1 Error Correction Code (ECC)

The UDM uses BCH Error Detection Code (EDC) and Error Correction Code (ECC) algorithms which correct up to 24 random single-bit errors for each 1024-byte block of data depending on spare area of flash memory. High performance is achieved through hardware-based error detection and correction.

1.1.2 Wear-Leveling Algorithms

Flash memory can be erased a limited number of times, This number is called the erase cycle limit, or write endurance limit, The erase cycle limit applies to each individual erase block in the flash device.

In a typical application, and especially if a file system is used, specific pages are constantly updated (e.g., the page that contains the FAT, registry, etc.). Without any special handling, these pages would wear out more rapidly than other pages, reducing the lifetime of the entire flash.

To overcome this inherent deficiency, Apacer's USB-Disk Module (UDM) uses wear-leveling algorithm. This wear-leveling algorithm ensures that consecutive writes of a specific sector are not written physically to the same page in the flash. This spreads flash media usage evenly across all pages, thereby maximizing flash lifetime.

The wear-leveling mechanism provides write/erase cycles for reliable data storage over an extended period.

1.1.3 Write Protection Mode (Optional)

When the device is configured to the Write-Protection mode, it enhances the data security and protection. This feature prevents the stored data from inadvertent system writes or erases, and viruses.

1.1.4 S.M.A.R.T.

S.M.A.R.T. is an acronym for Self-Monitoring, Analysis and Reporting Technology, an open standard allowing disk drives to automatically monitor their own health and report potential problems. It protects the user from unscheduled downtime by monitoring and storing critical drive performance and calibration parameters. Ideally, this should allow taking proactive actions to prevent impending drive failure. Apacer SMART feature adopts the standard SMART command B0h to read data from the drive. When the Apacer SMART Utility running on the host, it analyzes and reports the disk status to the host before the device is in critical condition.

2. Functional Block Diagram

The USB-Disk Module (UDM) contains a controller, embedded firmware, and Flash Media with a female connector. The UDM interfaces with the host system allowing data to be written to and read from the Flash Media.

4. Performance & Reliability Specifications

4.1 Capacity Specifications

The USB-Disk Module product family is available as below table matrix.

Table 4-1 Capacity Specifications

Density	Total Bytes
256MB	254,509,056
512 MB	512,458,752
1GB	1,029,406,720
2GB	2,061,205,504
4GB	4,120,920,064
8GB	8,248,131,584
16GB	16,030,662,656
32GB	32,061,292,544

Note: The number of total bytes may vary depending on the file system in use.

4.2 Performance Specifications

Table 4-2 Performance Specifications

Sustained Write (MB/s)	10	15	19	19	21	15	22	21

Note: Results may vary in real world platforms or flash configurations.

4.3 Environmental Specifications

Environmental specification of the USB-Disk Module (UDM) product family which follows the MIL-STD-810F standards is available as shown in Table 4-3.

Table 4-3 Environmental Specifications

Temperature	Operation	0°C to 70°C (Std.); -40°C to 85°C (Ext. Temp.)
	Storage	-40°C to 85°C
Vibration	Sine wave 10 Hz to 500 Hz, 50 m/s ² , 3 axes (IEC 68-2-6, non-operating)	
Shock	Half sine wave 50G, 6 axes, 18 times (IEC 68-2-27, non-operating)	
EMC	FCC, CE	

4.4 Mean Time Between Failures (MTBF)

Mean Time Between Failures (MTBF) is predicted based on reliability data for the individual components in this device. The measurement assumes that device failure rate can be generated by the sum of failure rates in each component and a steady state failure rate can be predicated as equal to or greater than 4.20×10^6 hours.

Note: The MTBF is predicated and calculated based on “Bellcore Analysis Method 1”.

$$\lambda_{ss} = \pi_E \sum_{i=1}^m (Ni \lambda_{SSi})$$

m : number of component types

λ_{ss} : device failure rate at steady state

Ni : quantity of i type component

λ_{SSi} : failure rate for i type component at steady state

π_E : device environment factor

5. Electrical Specifications

5.1 Operating Conditions

Caution: Absolute Maximum Stress Ratings – Applied conditions greater than those listed under “Absolute Maximum Stress Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these conditions or conditions greater than those defined in the operational sections of this data sheet is not implied. Exposure to absolute maximum stress rating conditions may affect device reliability.
